

NORTHGATE URGENT CARE

Discharge Instructions

Patient: Ethan Park

Age: 11 years

Date of Discharge: June 14, 2026

DIAGNOSIS:

Closed fracture of left forearm (distal radius). Cast applied.

MEDICATIONS AT DISCHARGE:

1. Acetaminophen 325mg - every 6 hours as needed for pain
2. Ibuprofen 200mg - every 6-8 hours as needed for pain (may alternate with acetaminophen)

FOLLOW-UP APPOINTMENTS:

- Orthopedic follow-up in 1 week (June 21) for repeat X-ray and cast check

ACTIVITY RESTRICTIONS:

- Keep cast clean and dry at all times - no swimming or bathing the arm
- No contact sports, gym class, or playground equipment for 6 weeks
- Elevate arm above heart level when possible to reduce swelling

WARNING SIGNS - GO TO THE EMERGENCY ROOM IF:

- Numbness, tingling, or loss of feeling in fingers
- Fingers turning blue, pale, or very cold
- Severe pain not relieved by medication
- Cast feels too tight or cracks/breaks
